Center toilet seat on the top of the structure and trace the inside of the ring with a marker. Use a chainsaw to cut out the shape of the hole and then attach the toilet seat lid.

The framing composed of parts 3 and 4 should sit flush with the top of the box composed of part 7.

Scale: 1:30

Version: 1

Page 28 of 38

A_FRAME assemblies are to be spaced in 2ft intervals from center to center with the two A_FRAME assemblies on either end being flush with the ends of the A_FRAME_SUPPORTs they are resting on. This will result in there only being a spacing of 22.50" between the final two A_FRAME assemblies.

	Philmont Scout Ranch		Title: ASSEMBLY 4
	Red Roof Inn V3		Tolerances: ± 0.25

Scale: 1:20

Version: 1

Page 30 of 38

SCALE 0.020

The CENTER_WALL assembly will fit exactly between the two center POSTS of the Red Roof Inn. It should be placed flush on the ground and arrange the assembly such that the back sides of the framing for the CENTER WALL are flush with one side of the two center POSTS. This will center the CENTER_WALL adequately.

	Philmont Scout Ranch		Title: ASSEMBLY 6
	Red Roof Inn V3		Tolerances: ± 0.25
Drawn by: Ronald La Curan		N/A	Index: N/A
Date: 10/06/08	Scale: 1:20	Version: 1	Page 31 of 38

SCALE 0.020

Each SIDE_WALL assembly should fit exactly between the POSTS already in place. They should be aligned such that the front side of the vertical framing on them (the side that the SIDE_WALL_PLANKing attaches to) is flush with the outer side of the POSTS.

	Philmont Scout Ranch	Title: ASSEMBLY 7A	
	Red Roof Inn V3	Tolerances: ± 0.25	
Drawn by: Ronald La Curan	N/A	Index: N/A	
Date: 10/06/08	Scale: 1:30	Version: 1	Page 32 of 38

The proper gap here can be easily achieved by using two 2x4x8 blocks, lightly nailed into the bordering POSTS. Place the SIDE_WALL upon these two blocks and this will keep the SIDE_WALL level and provide a platform for it to rest while you nail it in place.

	Philmont Scout Ranch		Title: ASSEMBLY 7B

Date: 10/06/08	Scale: 1:20	Version: 1	Page 34 of 38

DOOR_STOP_1 and DOOR_STOP_2 are nailed into the POSTS flush against the POSTS.

DOOR_STOP_3 is a 2x2 that will be located on the left hand side POST. It should be placed flush with the side of the POST closest to you if you were looking into the structure from outside.

Place TOILET_SEAT so that the rearmost portion of the outer frame is up against the CENTER_WALL. Then center the TOILET_SEAT along the FLOOR boards. A dimension is given for assistance. Once centered, using a marker, trace around the box base of the TOILET_SEAT, remove the TOILET_SEAT and use a chain saw to cut out the hole and then slide the TOILET_SEATS into place. IMPORTANT: Trace only the box made by the 3/4" plywood portion of the TOILET_SEAT, not around the outer frame. If you use the outer frame, the TOILET_SEAT will fall right through the floor.

Red Roof Inn Lumber Requirements and Cost Estimate

The following list is provided as an estimate of the required lumber to build one Red Roof Inn:

	6'	8'	10'	12'	14'	16'
6x6				2		
4x4			4			
2x12		1		1		2
2x10						
2x8						
2x6				2		
2x4		1	5	1	2	2
2x2			2		1	
1x12					1	2
1x10			1		8	
1x8						
1x6		1		6		
1x4						
1x2	1					

*The 1x2 could be replaced by just using a piece of 2x4 but in half.

**In addition to this list, one will need to purchase an 8'x4' section of 3/4" plywood.

This list was produced using hand calculations to optimize the cuts of wood required to create the pieces of the structure (i.e. find out the least amount of lumber needed to create all of the pieces).

The price listed below reflects current market values for RBS True Value Building Materials, INC in Northern New Mexico and is given only as an estimate. Prices will vary both by location and random market fluctuations. Using pricing provided by RBS the cost of a Red Roof Inn was estimated to be **\$446.29**

Date: October 20, 2008
